

2025 SARTA CONFERENCE – Session 2 – QUESTIONS for VIVA ENERGY

- What fuel security/storage does viva have in Australia and how do they plan to mitigate risk given the instability in the current world market?
- We currently only have 28 days supply out of a mandated 90 Days. With feedstock shortages, how do we get to the 90 day number without rationing supplies?
- Is there a power difference for renewable diesel vs conventional seen by those using the solution. If the hydrocarbons are different how does that affect equipment operations? Lower burn temps or higher burnt rates for example?
- Expected entry cost of renewable diesel to refined diesel, as demand usually drives price?
- Do alternative fuels change my HV maintenance and costs?
- If I change to alternative fuels does it affect my engine warranty?
- Do you think the goals set to reduce greenhouse gases by 2035 then to zero by 2050 is achievable?
- With the current world climate, which direction do you see oil barrel price going too?
- Will HVO be commercially available at the pump? If so what would be the price difference to standard diesel?
